

Assignment #1: Associate Software Engineer

Create a dev org using developer.salesforce.com/signup.

Build a web application that executes standard CRUD (Create, Read, Update, Delete) operations on Salesforce standard objects, namely, Account, Opportunity, Lead, Contact, and Case, selected via a central UI dropdown. Upon picking an object, the application dynamically displays selected object fields (minimum 5, maximum 10) and records, allowing users to view, create, edit, or delete data directly without using the native Salesforce interface.

Authentication should be handled via OAuth 2.0 through an External Client App. Use the tokens from OAuth 2.0 to perform operations in Salesforce.

- Sign up for a Salesforce Developer Org at developer.salesforce.com/signup.
- Create an External Client App. It will act as a bridge to pass data between Salesforce and the web application (You can learn the metadata/tooling API).
- Learn OAuth 2.0 for a better understanding of authorization.

Web App: Use React/Angular, Node.js/FastAPI, any tech stack of your choice.

1. A login Button to log in to Salesforce.
2. Dropdown with 5 Salesforce Standard object options: Account, Opportunity, Lead, Contact, and Case.
3. Use pagination: load 20 records at a time; on scroll end, load the next 20 records, and so on.
4. Button to view, update, and delete records.
5. Deploy this application on any free online server of your choice.

Assignment Submission Guidelines

1. ***Please be advised that only candidates who have completed their studies are eligible to attempt the assignment. If you are currently pursuing your education, we kindly request that you do not submit the assignment, as only those who have graduated will be considered.***
2. ***All code assignments must be deployed on a local server, and the link must be shared. Assignments submitted in any other format, such as Word, PDF, or image files, will not be considered for review.***
3. ***You also need to share the Git repository link.***
4. ***Only candidates who submit fully functioning solutions for all the listed assignments will be eligible to proceed to the next level.***
5. ***The deadline for submission is 10 working days from the assignment date. Submission***

received after the deadline will not be accepted or reviewed.

***The application deployed link, along with an updated resume, should be sent to the email address:
careers@cloudvandana.com.***
